

This IC, developed using CMOS technology, is a high-accuracy voltage detector. The detection voltage and release voltage are fixed internally with an accuracy of $\pm 1.5\%$.

Since the detection response time is as fast as 10 μs max., voltage abnormalities can be detected and notified quickly.

Apart from the power supply pin, the detection voltage input pin (SENSE pin) is also prepared, so the output is stable even if the SENSE pin voltage (V_{SENSE}) falls to 0 V. The SENSE pin also has a built-in reverse connection protection circuit that reduces current in the SENSE pin during a reverse connection.

The release signal can be delayed by setting a capacitor externally, and the release delay time accuracy is $\pm 20\%$ ($C_D = 3.3 \text{ nF}$). The output form is Nch open-drain output.

ABLIC Inc. offers FIT rate calculated based on actual customer usage conditions in order to support customer functional safety design.

For more information regarding our FIT rate calculation, contact our sales representatives.

Caution This product can be used in vehicle equipment and in-vehicle equipment. Before using the product for these purposes, it is imperative to contact our sales representatives.

■ Features

- Detection voltage: 4.0 V to 12.0 V (0.05 V step)
- Detection voltage accuracy: $\pm 1.5\%$
- Hysteresis width selectable from "Available" / "Unavailable": "Available": 2.0%, 5.0%, 10.0%
"Unavailable": 0%
- Detection response time: 10 μs max. (S-19114 Series L / M / N / R type)
25 μs max. (S-19114 Series P / Q / S / T type)
- Release delay time: 10 ms typ. ($C_D = 3.3 \text{ nF}$)
- Release delay time accuracy: $\pm 20\%$ ($C_D = 3.3 \text{ nF}$)
- Current consumption: 2.0 μA typ.
- Operation voltage range: 3.0 V to 36.0 V
- Output form: Nch open-drain output
- Built-in reverse connection protection circuit: Reduces current in the SENSE pin during a reverse connection.
- Operation temperature range: $T_a = -40^\circ\text{C}$ to $+125^\circ\text{C}$
- Lead-free (Sn 100%), halogen-free
- AEC-Q100 in process*1

*1. Contact our sales representatives for details.

■ Applications

- Automotive battery voltage detection
- For automotive use (engine, transmission, suspension, ABS, related-devices for EV / HEV / PHEV, etc.)

■ Packages

- SOT-23-5
- HSNT-6(2025)

■ Detection response time

$V_{\text{DET(S)}} = 8.0 \text{ V}$, $V_{\text{HYS}} = 5.0 \%$, $V_{\text{DD}} = 13.5 \text{ V}$,
 $V_{\text{SENSE}} = V_{\text{DET(S)}} + 1.0 \text{ V} \rightarrow V_{\text{DET(S)}} - 1.0 \text{ V}$,
pull-up to V_{DD} , pull-up resistance : 100 k Ω

Table 2 Package Drawing Codes

Package Name	Dimension	Tape	Reel	Land	Stencil Opening
SOT-23-5	MP005-A-P-SD	MP005-A-C-SD	MP005-A-R-SD	-	-
HSNT-6(2025)	PJ006-B-P-SD	PJ006-B-C-SD	PJ006-B-R-SD	PJ006-B-LM-SD	PJ006-B-LM-SD

■ Pin Configurations

1. SOT-23-5

Figure 3

Table 3

Pin No.	Symbol	Description
1	OUT	Voltage detection output pin
2	VSS	GND pin
3	CD*1	Connection pin for release delay time adjustment capacitor
4	SENSE	Detection voltage input pin
5	VDD	Voltage input pin

- *1. Connect a capacitor between the CD pin and the VSS pin. The release delay time can be adjusted according to the capacitance.
 Moreover, the CD pin is available even when it is open.

2. HSNT-6(2025)

Figure 4

Table 4

Pin No.	Symbol	Description
1	VDD	Voltage input pin
2	NC*2	No connection
3	SENSE	Detection voltage input pin
4	CD*3	Connection pin for release delay time adjustment capacitor
5	VSS	GND pin
6	OUT	Voltage detection output pin

- *1. Connect the heat sink of backside at shadowed area to the board, and set electric potential GND.
 However, do not use it as the function of electrode.
- *2. The NC pin is electrically open.
 The NC pin can be connected to the VDD pin or the VSS pin.
- *3. Connect a capacitor between the CD pin and the VSS pin. The release delay time can be adjusted according to the capacitance.
 Moreover, the CD pin is available even when it is open.

■ Absolute Maximum Ratings

Table 5

(Ta = -40°C to +125°C unless otherwise specified)

Item	Symbol	Absolute Maximum Rating	Unit
Power supply voltage	V _{DD}	V _{SS} - 0.3 to V _{SS} + 45.0	V
SENSE pin voltage	V _{SENSE}	V _{SS} - 30.0 to V _{SS} + 45.0	V
CD pin input voltage	V _{CD}	V _{SS} - 0.3 to V _{DD} + 0.3 ≤ V _{SS} + 7.0	V
Output voltage	V _{OUT}	V _{SS} - 0.3 to V _{SS} + 45.0	V
Output current	I _{OUT}	25	mA
Junction temperature	T _j	-40 to +150	°C
Operation ambient temperature	T _{opr}	-40 to +125	°C
Storage temperature	T _{stg}	-40 to +150	°C

Caution The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

■ Thermal Resistance Value

Table 6

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	
Junction-to-ambient thermal resistance*1	θ _{JA}	SOT-23-5	Board A	–	192	–	°C/W
			Board B	–	160	–	°C/W
			Board C	–	–	–	°C/W
			Board D	–	–	–	°C/W
			Board E	–	–	–	°C/W
		HSNT-6(2025)	Board A	–	180	–	°C/W
			Board B	–	128	–	°C/W
			Board C	–	43	–	°C/W
			Board D	–	44	–	°C/W
			Board E	–	36	–	°C/W

*1. Test environment: compliance with JEDEC STANDARD JESD51-2A

Remark Refer to "■ Power Dissipation" and "Test Board" for details.

■ Electrical Characteristics

Table 7

(Ta = -40°C to +125°C unless otherwise specified)

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	Test Circuit
Detection voltage*1	V _{DET}	V _{DD} = 13.5 V, 4.0 V ≤ V _{DET(S)} ≤ 12.0 V	V _{DET(S)} × 0.985	V _{DET(S)}	V _{DET(S)} × 1.015	V	1

*1. V_{DET}: Actual detection voltage value, V_{DET(S)}: Set detection voltage value

*2. The Release voltage (V_{REL}) is as follows.

L / P type (hysteresis width "Unavailable"): V_{REL} = V_{DET}

M / N / R / Q / S / T type (hysteresis width "Available"): V_{REL} = V_{DET} + V_{HYS}

*3. V_{REL(S)}: Set release voltage value

*4. V_{DS}: Drain-to-source voltage of the output transistor

*5. The time period from when the pulse voltage of V_{DET(S)} + 1.0 V → V_{DET(S)} – 1.0 V is applied to the SENSE pin after V_{SENSE} reaches the release voltage once, until V_{OUT} reaches 50% of V_{DD}.

*6. The time period from when the pulse voltage of V_{REL(S)} – 1.0 V → V_{REL(S)} + 1.0 V is applied to the SENSE pin to when V_{OUT} reaches 50% of V_{DD}.

■ **Test Circuits**

Figure 5 Test Circuit 1

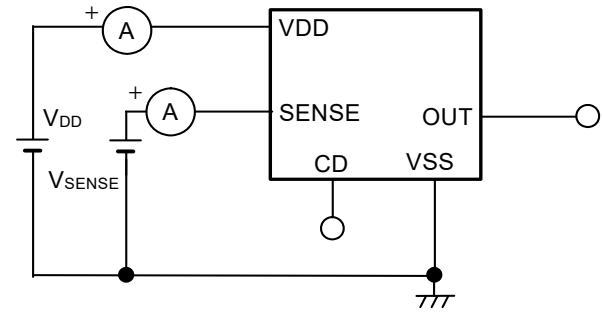

Figure 6 Test Circuit 2

Figure 7 Test Circuit 3

Figure 8 Test Circuit 4

■ Standard Circuit

- *1. C_D is a release delay time adjustment capacitor. The C_D should be connected directly to the CD pin and the VSS pin.
- *2. R_{OUT} is the external pull-up resistors for the reset output pin.

Figure 9

Caution The above connection diagram and constants will not guarantee successful operation. Perform thorough evaluation including the temperature characteristics with an actual application to set the constants.

■ Selection of Release Delay Time Adjustment Capacitor (C_D)

In this IC, the release delay time adjustment capacitor (C_D) is necessary between the CD pin and the VSS pin to adjust the release delay time (t_{DELAY}) of the detector. Refer to "3. Delay circuit" in "■ Operation" for details.

Caution Perform thorough evaluation including the temperature characteristics with an actual application to select C_D .

■ Explanation of Terms

1. Detection voltage (V_{DET})

The detection voltage is a SENSE pin voltage at which the output voltage in **Figure 12** turns to "L". The detection voltage varies slightly among products of the same specification. The variation of detection voltage between the specified minimum and the maximum is called the detection voltage range (Refer to "**Figure 10 Detection Voltage**").

Example: In $V_{DET} = 10.0\text{ V}$ product, the detection voltage is at any point in the range of $9.85\text{ V} \leq V_{DET} \leq 10.15\text{ V}$.
This means that some $V_{DET} = 10.0\text{ V}$ product has $V_{DET} = 9.85\text{ V}$ and some has $V_{DET} = 10.15\text{ V}$.

2. Release voltage (V_{REL})

The release voltage is a SENSE pin voltage at which the output voltage in **Figure 12** turns to "H". The release voltage varies slightly among products of the same specification. The variation of release voltage between the specified minimum and the maximum is called the release voltage range (Refer to "**Figure 11 Release Voltage**").

The release voltage becomes the value differs from the detection voltage within the range shown below.

- M / Q type: 1% to 3% (2% typ.)
- N / S type: 4% to 6% (5% typ.)
- R / T type: 9% to 11% (10% typ.)

Example: For R type, $V_{DET} = 10.0\text{ V}$ product, the release voltage is at any point in the range of $10.736\text{ V} \leq V_{REL} \leq 11.267\text{ V}$ despite $V_{REL} = 11.0\text{ V}$ typ.

This means that some R type, $V_{DET} = 10.0\text{ V}$ product has $V_{REL} = 10.736\text{ V}$ and some has $V_{REL} = 11.267\text{ V}$.

Figure 10 Detection Voltage

Figure 11 Release Voltage

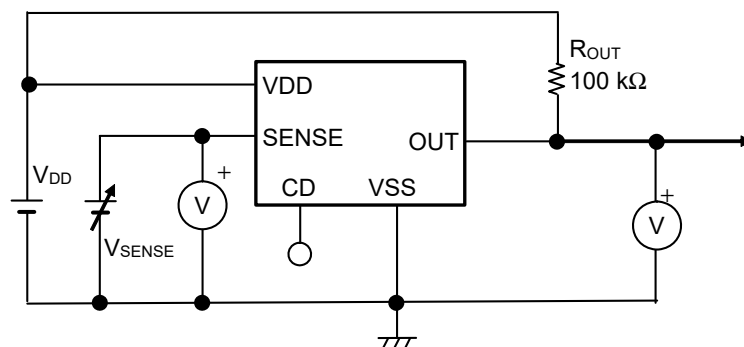

Figure 12 Test Circuit of Detection Voltage and Release Voltage

3. Hysteresis width (V_{HYS})

The hysteresis width is the voltage difference between the detection voltage (V_{DET}) and the release voltage (V_{REL}). Voltage difference between V_{REL} and V_{DET} is the hysteresis width (V_{HYS}^{*1}) of the OUT pin. Setting the hysteresis width between V_{DET} and V_{REL} , prevents malfunction caused by noise on the input voltage.

*1. Refer to "1.2 S-19114 Series M / N / R / Q / S / T type" in "■ Operation" for details.

4. Feed-through current

The feed-through current is a current that flows instantaneously to the VDD pin at the time of detection and release of a voltage detector.

■ Operation

1. Basic operation

Figure 13 and Figure 15 show that the OUT pin being pulled up by resistors (R_{OUT}) is an example of basic operation.

1.1 S-19114 Series L / P type

(1) When the power supply voltage (V_{DD}) is the minimum operation voltage or higher, and the SENSE pin voltage (V_{SENSE}) is the release voltage (V_{REL}) or higher, the Nch transistor is turned off to output V_{DD} ("H") when the output is pulled up.

At this time, the input voltage to the comparator is $\frac{(R_B + R_C) \cdot V_{SENSE}}{R_A + R_B + R_C}$.

(2) When V_{SENSE} decreases to the detection voltage (V_{DET}) or lower (point A in Figure 14), the Nch transistor is turned on. And then V_{SS} ("L") is output from the OUT pin after the elapse of the detection response time (t_{RESET}).

(3) Even if V_{SENSE} further decreases to the IC's minimum operation voltage or lower, the output from the OUT pin is stable when V_{DD} is minimum operation voltage or higher.

(4) Even if V_{SENSE} increases, V_{SS} is output when V_{SENSE} is lower than V_{REL}.

(5) When V_{SENSE} increases to V_{REL} or higher (point B in Figure 14), the Nch transistor is turned off. And then V_{DD} is output from the OUT pin after the elapse of the release delay time (t_{DELAY}) when the output is pulled up.

*1. Parasitic diode

Figure 13 Operation of S-19114 Series L / P type

Remark The release voltage is set to the same value as the detection voltage, since there is no hysteresis width.

Figure 14 Timing Chart of S-19114 Series L / P Type

1.2 S-19114 Series M / N / R / Q / S / T type

(1) When the power supply voltage (V_{DD}) is the minimum operation voltage or higher, and the SENSE pin voltage (V_{SENSE}) is the release voltage (V_{REL}) or higher, the Nch transistor is turned off to output V_{DD} ("H") when the output is pulled up.

Since the Nch transistor (N1) is turned off, the input voltage to the comparator is $\frac{(R_B + R_C) \cdot V_{SENSE}}{R_A + R_B + R_C}$.

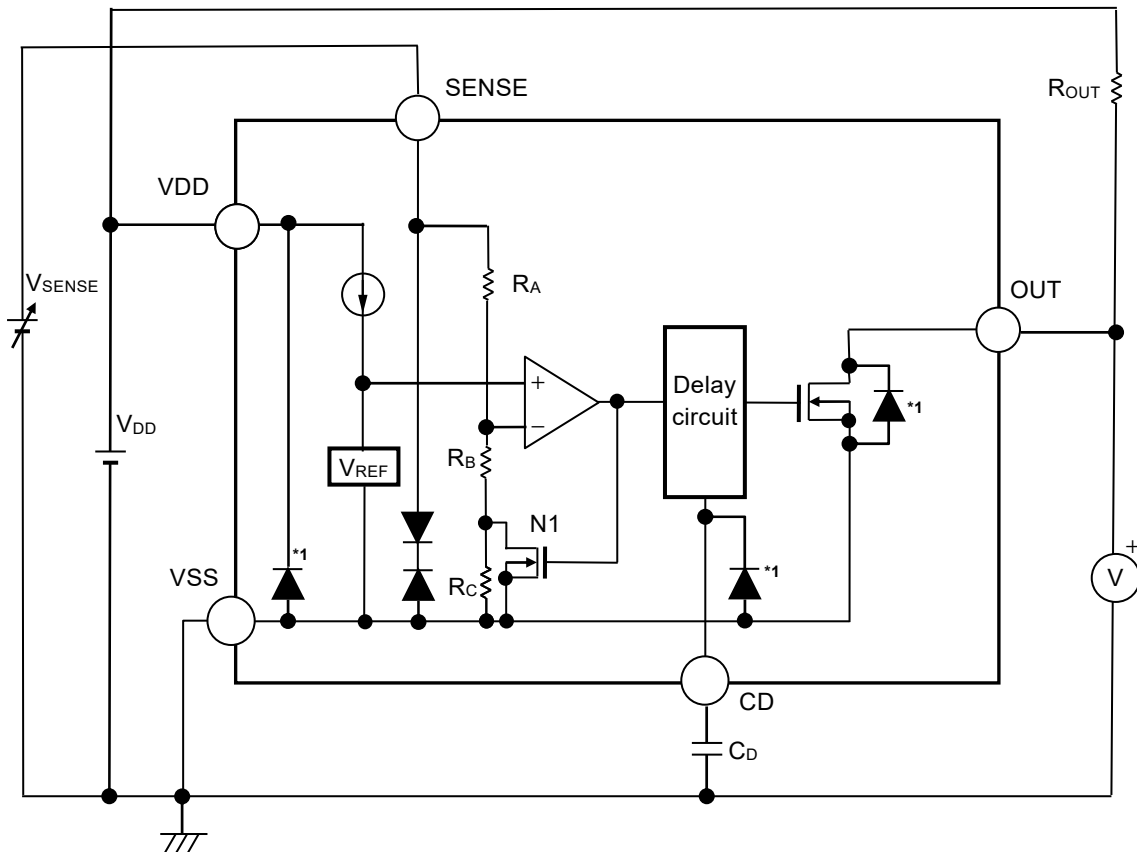

(2) Even if V_{SENSE} decreases to V_{REL} or lower, V_{DD} is output when V_{SENSE} is higher than the detection voltage (V_{DET}). When V_{SENSE} decreases to V_{DET} or lower (point A in **Figure 16**), the Nch transistor is turned on. And then V_{SS} ("L") is output from the OUT pin after the elapse of the detection response time (t_{RESET}).

At this time, N1 is turned on, and the input voltage to the comparator is $\frac{R_B \cdot V_{SENSE}}{R_A + R_B}$.

(3) Even if V_{SENSE} further decreases to the IC's minimum operation voltage or lower, the output from the OUT pin is stable when V_{DD} is minimum operation voltage or higher.

(4) Even if V_{SENSE} exceeds V_{DET} , V_{SS} is output when V_{SENSE} is lower than V_{REL} .

(5) When V_{SENSE} increases to V_{REL} or higher (point B in **Figure 16**), the Nch transistor is turned off. And then V_{DD} is output from the OUT pin after the elapse of the release delay time (t_{DELAY}) when the output is pulled up.

*1. Parasitic diode

Figure 15 Operation of S-19114 Series M / N / R / Q / S / T type

2.2 Selection of R_A and R_B

In **Figure 17**, the relation between the external setting detection voltage (V_{DX}) and the actual detection voltage (V_{DET}) is ideally calculated by the equation below.

$$V_{DX} = V_{DET} \times \left(1 + \frac{R_A}{R_B}\right) \dots\dots\dots(1)$$

However, in reality there is an error in the current flowing through R_{SENSE}. When considering this error, the relation between V_{DX} and V_{DET} is calculated as follows.

$$\begin{aligned} V_{DX} &= V_{DET} \times \left(1 + \frac{R_A}{R_B \parallel R_{SENSE}}\right) \\ &= V_{DET} \times \left(1 + \frac{R_A}{\frac{R_B \times R_{SENSE}}{R_B + R_{SENSE}}}\right) \\ &= V_{DET} \times \left(1 + \frac{R_A}{R_B}\right) + \frac{R_A}{R_{SENSE}} \times V_{DET} \dots\dots\dots(2) \end{aligned}$$

By using equations (1) and (2), the error is calculated as $V_{DET} \times \frac{R_A}{R_{SENSE}}$.

The error rate is calculated as follows by dividing the error by the right-hand side of equation (1).

$$\frac{R_A \times R_B}{R_{SENSE} \times (R_A + R_B)} \times 100 [\%] = \frac{R_A \parallel R_B}{R_{SENSE}} \times 100 [\%] \dots\dots(3)$$

As seen in equation (3), the smaller the resistance values of R_A and R_B compared to R_{SENSE}, the smaller the error rate becomes.

Also, the relation between the external setting hysteresis width (V_{HX}) and the hysteresis width (V_{HYS}) is calculated by equation below. Error due to R_{SENSE} also occurs to the relation in a similar way to the detection voltage.

$$V_{HX} = V_{HYS} \times \left(1 + \frac{R_A}{R_B}\right) \dots\dots\dots(4)$$

Figure 17 Detection Voltage External Setting Circuit

Caution If R_A and R_B are large, the SENSE pin input impedance becomes higher and may cause a malfunction due to noise. In this case, connect a capacitor between the SENSE pin and the VSS pin.

3. Delay circuit

The delay circuit has a function that adjusts the release delay time (t_{DELAY}) from when the SENSE pin voltage (V_{SENSE}) reaches the release voltage ($V_{\text{REL}} = V_{\text{DET}} + V_{\text{HYS}}$) or higher to when the output from OUT pin inverts.

t_{DELAY} is determined by the delay coefficient, the release delay time adjustment capacitor (C_D) and the release delay time when the CD pin is open (t_{DELAY0}). They are calculated by the equations below.

$$t_{\text{DELAY}} [\text{ms}] = \text{Delay coefficient} \times C_D [\text{nF}] + t_{\text{DELAY0}} [\text{ms}]$$

Table 8

Operation Temperature	Delay Coefficient		
	Min.	Typ.	Max.
Ta = -40°C to +125°C	2.76	3.00	3.28

Table 9

Operation Temperature	Release Delay Time when CD Pin is Open (t_{DELAY0})		
	Min.	Typ.	Max.
Ta = -40°C to +125°C	0.01	0.04	0.20

- Caution 1.** Mounted board layout should be made in such a way that no current flows into or flows from the CD pin since the impedance of the CD pin is high, otherwise correct delay time cannot be provided.
2. There is no limit for the capacitance of C_D as long as the leakage current of the capacitor can be ignored against the built-in constant current value (approximately 350 nA). The leakage current may cause error in delay time. When the leakage current is larger than the built-in constant current, no detect or release takes place.
 3. The above equations will not guarantee successful operation. Determine the capacitance of C_D through thorough evaluation including temperature characteristics in the actual usage conditions.

■ Usage Precautions

1. Feed-through current at the time of detection and release

In this IC, a feed-through current flows instantaneously at the time of detection and release. Therefore, if the input impedance is increased, oscillation may occur due to the voltage drop caused by the feed-through current. When this IC is used in the configuration shown in **Figure 18**, the input impedance is recommended to be 1.0 kΩ or less. Perform a sufficient evaluation including the temperature characteristics under the actual operating conditions.

Figure 18

2. Power down (Reference)

As shown in **Figure 19**, when the VDD pin voltage (V_{DD}) falls sharply in the state of $V_{SENSE} < V_{REL}$, the OUT pin may be released. So be careful.

Figure 20 shows the relationship between the dV_{REL}^{*1} that can hold the detected state and the falling slew rate (SR) of V_{DD} .

Please perform a sufficient evaluation with the actual machine when using it.

*1. dV_{REL} : Difference between $V_{REL(S)}$ and V_{SENSE}

Figure 19

Figure 20

■ Precautions

- Do not apply an electrostatic discharge to this IC that exceeds the performance ratings of the built-in electrostatic protection circuit.
- Because the SENSE pin has a high impedance, malfunctions may occur due to noise.
Be careful of wiring adjoining SENSE pin wiring in actual applications.
- When designing for mass production using an application circuit described herein, the product deviation and temperature characteristics should be taken into consideration. ABLIC Inc. shall not bear any responsibility for patent infringements related to products using the circuits described herein.
- ABLIC Inc. claims no responsibility for any disputes arising out of or in connection with any infringement by products including this IC of patents owned by a third party.

Material		FR-4
Number of copper foil layer		4
Copper foil layer [mm]	1	Land pattern and wiring for testing: t0.070
	2	74.2 x 74.2 x t0.035
	3	74.2 x 74.2 x t0.035
	4	74.2 x 74.2 x t0.070
Thermal via		-

No. SOT23x-A-Board-SD-2.0

HSNT-6(2025) Test Board

 IC Mount Area

(1) Board A

Item		Specification
Size [mm]		114.3 x 76.2 x t1.6
Material		FR-4
Number of copper foil layer		2
Copper foil layer [mm]	1	Land pattern and wiring for testing: t0.070
	2	-
	3	-
	4	74.2 x 74.2 x t0.070
Thermal via		-

(2) Board B

Item		Specification
Size [mm]		114.3 x 76.2 x t1.6
Material		FR-4
Number of copper foil layer		4
Copper foil layer [mm]	1	Land pattern and wiring for testing: t0.070
	2	74.2 x 74.2 x t0.035
	3	74.2 x 74.2 x t0.035
	4	74.2 x 74.2 x t0.070
Thermal via		-

(3) Board C

Item		Specification
Size [mm]		114.3 x 76.2 x t1.6
Material		FR-4
Number of copper foil layer		4
Copper foil layer [mm]	1	Land pattern and wiring for testing: t0.070
	2	74.2 x 74.2 x t0.035
	3	74.2 x 74.2 x t0.035
	4	74.2 x 74.2 x t0.070
Thermal via		Number: 4 Diameter: 0.3 mm

Land Recommendation

Caution It is recommended to solder the heat sink to a board in order to ensure the heat radiation.
 注意 放熱性を確保する為に、PKGの裏面放熱板(ヒートシンク)を基板に半田付けする事を推奨いたします。

Stencil Opening

No. PJ006-B-LM-SD-1.0

Caution ① Mask aperture ratio of the lead mounting part is 100~120%.
 ② Mask aperture ratio of the heat sink mounting part is 30%.
 ③ Mask thickness: t0.12 mm
 ④ Reflow atmosphere: Nitrogen atmosphere is recommended.
 (Oxygen concentration: 1000ppm or less)

注意 ①リード実装部のマスク開口率は100~120%です。
 ②放熱板実装のマスク開口率は30%です。
 ③マスク厚み : t0.12 mm
 ④リフロー雰囲気・窒素雰囲気(酸素濃度1000ppm以下) 推奨

Disclaimers (Handling Precautions)

1. All the information described herein (product data, specifications, figures, tables, programs, algorithms and application circuit examples, etc.) is current as of publishing date of this document and is subject to change without notice.
2. The circuit examples and the usages described herein are for reference only, and do not guarantee the success of any specific mass-production design.
ABLIC Inc. is not liable for any losses, damages, claims or demands caused by the reasons other than the products described herein (hereinafter "the products") or infringement of third-party intellectual property right and any other right due to the use of the information described herein.
3. ABLIC Inc. is not liable for any losses, damages, claims or demands caused by the incorrect information described herein.
4. Be careful to use the products within their ranges described herein. Pay special attention for use to the absolute maximum ratings, operation voltage range and electrical characteristics, etc.
ABLIC Inc. is not liable for any losses, damages, claims or demands caused by failures and / or accidents, etc. due to the use of the products outside their specified ranges.
5. Before using the products, confirm their applications, and the laws and regulations of the region or country where they are used and verify suitability, safety and other factors for the intended use.
6. When exporting the products, comply with the Foreign Exchange and Foreign Trade Act and all other export-related laws, and follow the required procedures.
7. The products are strictly prohibited from using, providing or exporting for the purposes of the development of weapons of mass destruction or military use. ABLIC Inc. is not liable for any losses, damages, claims or demands caused by any provision or export to the person or entity who intends to develop, manufacture, use or store nuclear, biological or chemical weapons or missiles, or use any other military purposes.
8. The products are not designed to be used as part of any device or equipment that may affect the human body, human life, or assets (such as medical equipment, disaster prevention systems, security systems, combustion control systems, infrastructure control systems, vehicle equipment, traffic systems, in-vehicle equipment, aviation equipment, aerospace equipment, and nuclear-related equipment), excluding when specified for in-vehicle use or other uses by ABLIC, Inc. Do not apply the products to the above listed devices and equipments.
ABLIC Inc. is not liable for any losses, damages, claims or demands caused by unauthorized or unspecified use of the products.
9. In general, semiconductor products may fail or malfunction with some probability. The user of the products should therefore take responsibility to give thorough consideration to safety design including redundancy, fire spread prevention measures, and malfunction prevention to prevent accidents causing injury or death, fires and social damage, etc. that may ensue from the products' failure or malfunction.
The entire system in which the products are used must be sufficiently evaluated and judged whether the products are allowed to apply for the system on customer's own responsibility.
10. The products are not designed to be radiation-proof. The necessary radiation measures should be taken in the product design by the customer depending on the intended use.
11. The products do not affect human health under normal use. However, they contain chemical substances and heavy metals and should therefore not be put in the mouth. The fracture surfaces of wafers and chips may be sharp. Be careful when handling these with the bare hands to prevent injuries, etc.
12. When disposing of the products, comply with the laws and ordinances of the country or region where they are used.
13. The information described herein contains copyright information and know-how of ABLIC Inc. The information described herein does not convey any license under any intellectual property rights or any other rights belonging to ABLIC Inc. or a third party. Reproduction or copying of the information from this document or any part of this document described herein for the purpose of disclosing it to a third-party is strictly prohibited without the express permission of ABLIC Inc.
14. For more details on the information described herein or any other questions, please contact ABLIC Inc.'s sales representative.
15. This Disclaimers have been delivered in a text using the Japanese language, which text, despite any translations into the English language and the Chinese language, shall be controlling.
