The S-8225A Series includes high-accuracy voltage detection circuits and delay circuits, and can monitor the status of 3-serial to 5-serial cell lithium-ion rechargeable battery in single use. By switching the voltage level which is applied to the SEL1 pin and SEL2 pin, users are able to use the S-8225A Series for 3-serial to 5-serial cell pack. By cascade connection using the S-8225A Series, it is also possible to protect 6-serial or more cells lithium-ion rechargeable battery pack.

**Features**

- High-accuracy voltage detection function for each cell

  | Overcharge detection voltage n (n = 1 to 5) | 3.500 V to 4.400 V (50 mV step) |
  | Overcharge release voltage n (n = 1 to 5)  | 3.300 V to 4.400 V\(^1\) |
  | Overdischarge detection voltage n (n = 1 to 5) | 2.000 V to 3.200 V (100 mV step) |
  | Overdischarge release voltage n (n = 1 to 5) | 2.100 V to 3.400 V\(^2\) |

- Overcharge hysteresis voltage n (n = 1 to 5) is selectable in 0 V, or in 0.1 V to 0.4 V in 50 mV step. (Overcharge hysteresis voltage = Overcharge detection voltage – Overcharge release voltage)

- Overdischarge hysteresis voltage n (n = 1 to 5) is selectable in 0 V to 0.7 V in 100 mV step. (Overdischarge hysteresis voltage = Overdischarge release voltage – Overdischarge detection voltage)

- Overcharge detection delay time and overdischarge detection delay time can be set by external capacitor.

- Switchable between 3-serial to 5-serial cell by using the SEL1 pin and the SEL2 pin

- Cascade connection is available.

- The CO pin and the DO pin are controlled by the CTLC pin and the CTLD pin, respectively.

- Output voltage of the CO pin and the DO pin is limited to 12 V max.

- High-withstand voltage: Absolute maximum rating: 28 V

- Wide operation voltage range: 4 V to 26 V

- Wide operation temperature range: Ta = −40°C to +85°C

- Low current consumption

  - During operation (V1 = V2 = V3 = V4 = V5 = 3.4 V): 22 μA max. (Ta = +25°C)
  - During power-down (V1 = V2 = V3 = V4 = V5 = 1.6 V): 4.5 μA max. (Ta = +25°C)

- Lead-free (Sn 100%), halogen-free

**Application**

- Lithium-ion rechargeable battery pack

**Package**

- 16-Pin TSSOP
### Block Diagram

- **CTLD**: Input terminal for the control circuit
- **CTLC**: Input terminal for the control circuit
- **CO**: Input terminal for the delay circuit
- **DO**: Input terminal for the delay circuit
- **SEL1**: Selection input for the limit circuit
- **SEL2**: Selection input for the limit circuit
- **CDT**: Input terminal for the control circuit
- **CCT**: Input terminal for the control circuit

**Remark**: Diodes in the figure are parasitic diodes.

*1. Since products are not screened at high and low temperature, the specification for this temperature range is guaranteed by design, not tested in production.

*2. Refer to "6. Delay time setting" in "Operation" for details of the delay time function.
Test Circuits

1. **Overcharge detection voltage** (V\text{CU1}), **overcharge release voltage** (V\text{CL1}), **overdischarge detection voltage** (V\text{DL1}), **overdischarge release voltage** (V\text{DU1})
   (Test circuit 1)

   V\text{CU1} is defined as the voltage V1 when V1 is gradually increased and the CO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = V\text{CU} - 0.05 V. After that, V\text{CL1} is defined as the voltage V1 when V1 is gradually decreased and the CO pin output becomes release status after setting V2 = V3 = V4 = V5 = 3.2 V. Moreover, V\text{DL1} is defined as the voltage V1 when V1 is gradually decreased and the DO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.5 V. After that, V\text{DU1} is defined as the voltage V1 when V1 is gradually increased and the DO pin output becomes release status.

   Similarly, V\text{CU2}, V\text{CL2}, V\text{DL2} and V\text{DU2} can be defined by changing \text{Vn} (n = 2 to 5).

2. **0 V battery detection voltage** (V\text{0INH1}) (0 V battery detection function "available")
   (Test circuit 1)

   V\text{0INH1} is defined as the voltage V1 when V1 is gradually decreased and the CO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V.

   Similarly, V\text{0INHn} can be defined by changing \text{Vn} (n = 2 to 5).

3. **Overcharge detection delay time** (t\text{CU}), **overdischarge detection delay time** (t\text{DL})
   (Test circuit 2)

   t\text{CU} is defined as the time period from when V1 changes from 3.4 V to 4.5 V to when the CO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V.

   Moreover, t\text{DL} is defined as the time period from when V1 changes from 3.4 V to 1.6 V to when the DO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V.

4. **CCT pin voltage** (V\text{CCT}), **CDT pin voltage** (V\text{CDT})
   (Test circuit 2)

   V\text{CCT} is defined as the voltage between the CCT pin and the VSS pin during the time period when V1 changes from 3.4 V to 4.5 V to when the CO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V.

   Moreover, V\text{CDT} is defined as the voltage between the CDT pin and the VSS pin during the time period when V1 changes from 3.4 V to 1.6 V to when the DO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V.

5. **CTLC pin voltage "H"** (V\text{CTLCH}), **CTLC pin voltage "L"** (V\text{CTLCL}), **CTLD pin voltage "H"** (V\text{CTLDH}), **CTLD pin voltage "L"** (V\text{CTLDL})
   (Test circuit 3)

   V\text{CTLCL} is defined as the voltage V6 when V6 is gradually decreased and the CO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V, \text{V6} = \text{V7} = \text{VDS} (= V1 + V2 + V3 + V4 + V5), \text{V8} = \text{V9} = 0 V. After that, V\text{CTLC} is defined as the voltage V6 when V6 is gradually increased and the CO pin output becomes release status.

   Moreover, V\text{CTLDL} is defined as the voltage V7 when V7 is gradually decreased and the DO pin output becomes detection status after setting V1 = V2 = V3 = V4 = V5 = 3.4 V, \text{V6} = \text{V7} = \text{VDS} (= V1 + V2 + V3 + V4 + V5), \text{V8} = \text{V9} = 0 V. After that, V\text{CTLDH} is defined as the voltage V7 when V7 is gradually increased and the DO pin output becomes release status.
6. **SEL1 pin voltage "H" (VSELH1), SEL2 pin voltage "H" (VSELH2), SEL1 pin voltage "L" (VSELL1), SEL2 pin voltage "L" (VSELL2)**  
   (Test circuit 3)

   $V_{SELH1}$ is defined as the voltage $V_8$ when $V_8$ is gradually increased and the DO pin output becomes release status after setting $V_1 = V_2 = V_3 = V_5 = 3.5 \, V$, $V_4 = 0 \, V$, $V_6 = V_7 = V_{DS} \,(= V_1 + V_2 + V_3 + V_4 + V_5)$, $V_8 = V_9 = 0 \, V$. After that, $V_{SELL1}$ is defined as the voltage $V_8$ when $V_8$ is gradually decreased and the DO pin output becomes detection status.

   Moreover, $V_{SELH2}$ is defined as the voltage $V_9$ when $V_9$ is gradually increased and the DO pin output becomes release status after setting $V_1 = V_2 = V_3 = V_4 = 3.5 \, V$, $V_5 = 0 \, V$, $V_6 = V_7 = V_{DS} \,(= V_1 + V_2 + V_3 + V_4 + V_5)$, $V_8 = V_9 = 0 \, V$. After that, $V_{SELL2}$ is defined as the voltage $V_9$ when $V_9$ is gradually decreased and the DO pin output becomes detection status.

7. **CO pin voltage "H" (VCOH), DO pin voltage "H" (VDOH)**  
   (Test circuit 4)

   $V_{COH}$ is defined as the voltage between the CO pin and the VSS pin when $V_1 = V_2 = V_3 = V_4 = V_5 = 3.4 \, V$.

   $V_{DOH}$ is defined as the voltage between the DO pin and the VSS pin when $V_1 = V_2 = V_3 = V_4 = V_5 = 3.4 \, V$.

8. **CO pin source current (ICOH), CO pin sink current (ICOL), DO pin source current (IDOH), DO pin sink current (IDOL)**  
   (Test circuit 7)

   $I_{COH}$ is defined as the CO pin current when $V_1 = V_2 = V_3 = V_4 = V_5 = 3.4 \, V$, $V_6 = V_{COH} - 0.5 \, V$.

   $I_{COL}$ is defined as the CO pin current when $V_1 = 6.8 \, V$, $V_2 = 0 \, V$, $V_3 = V_4 = V_5 = 3.4 \, V$, $V_6 = 0.5 \, V$.

   $I_{DOH}$ is defined as the DO pin current when $V_1 = V_2 = V_3 = V_4 = V_5 = 3.4 \, V$, $V_7 = V_{DOH} - 0.5 \, V$.

   $I_{DOL}$ is defined as the DO pin current when $V_1 = 6.8 \, V$, $V_2 = 0 \, V$, $V_3 = V_4 = V_5 = 3.4 \, V$, $V_7 = 0.5 \, V$. 

ABLIC Inc.
## Operation

**Remark** Refer to "Connection Examples of Battery Monitoring IC".

1. **Normal status**

   When the voltage of each of the batteries is in the range from overcharge detection voltage \( V_{CLn} \) to overdischarge detection voltage \( V_{DLn} \), and the CTLC pin input voltage \( V_{CTLC} \) and the CTLD pin input voltage \( V_{CTLD} \) are higher than the CTLC pin voltage "H" \( V_{CTLCH} \) and the CTLD pin voltage "H" \( V_{CTLDH} \), respectively, the S-8225A Series defines each of the CO pin output voltage \( V_{CO} \) and the DO pin output voltage \( V_{DO} \) as "H". This is called normal status.

   \( V_{CO} \) is defined as the CO pin voltage "H" \( V_{COH} \) when it is "H". Similarly, \( V_{DO} \) is defined as the DO pin voltage "H" \( V_{DOH} \) when it is "H".

   **Caution** When the battery is connected for the first time, the S-8225A Series returns to normal status if the voltage of each of the batteries is in the range from overcharge release voltage \( V_{CLn} \) to overdischarge release voltage \( V_{DLn} \).

2. **Overcharge status**

   When the voltage of one of the batteries becomes \( V_{CLn} \) or higher, the CO pin output inverts and the S-8225A Series becomes detection status. This is called overcharge status.

   When the voltage of each of the batteries becomes overcharge release voltage \( V_{CLn} \) or lower, the overcharge status is released and the S-8225A Series returns to normal status.

3. **Overdischarge status**

   When the voltage of one of the batteries becomes \( V_{DLn} \) or lower, the DO pin output inverts and the S-8225A Series becomes detection status. This is called overdischarge status.

   When the voltage of each of the batteries becomes overdischarge release voltage \( V_{DLn} \) or higher, the overdischarge status is released and the S-8225A Series returns to normal status.
4. CTLC pin and CTLD pin
   The S-8225A Series has two pins to control. The CTLC pin controls the output voltage from the CO pin; the CTLD pin controls the output voltage from the DO pin. Thus it is possible for users to control the output voltages from the CO pin and DO pin, respectively. These controls precede the battery protection circuit.

   Table 6 Status Set by CTLC Pin

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>&quot;H&quot;*1</td>
<td>&quot;H&quot;*1</td>
</tr>
<tr>
<td>Open*2</td>
<td>VSS</td>
</tr>
<tr>
<td>&quot;L&quot;*3</td>
<td>VSS</td>
</tr>
</tbody>
</table>

*1. "H": CTLD ≥ VCTLDH
*2. Pulled down by ICTLDH
*3. "L": CTLD ≤ VCTLDL
*4. The status is controlled by the voltage detection circuit.

Caution When the power supply fluctuates, unexpected behavior might occur if an electrical potential is generated between the potentials of "H" level input to the CTLC / CTLD pins and IC's VDD by external filters.

5. 0 V battery detection function
   In the S-8225A Series, users are able to select a 0 V battery detection "available" function. If this optional function is selected, the CO pin becomes detection status when the voltage of one of the batteries becomes 0 V battery detection voltage (V0INH) or lower.
6. Delay time setting

When the voltage of one of the batteries becomes \( V_{\text{CUn}} \) or higher, the S-8225A Series charges the capacitor connected to the CCT pin rapidly up to the CCT pin voltage \( (V_{\text{CCT}}) \). After that, The S-8225A Series discharges the capacitor with the constant current of 100 nA, and the CO pin output is defined as detection status at the time when the CCT pin voltage falls to a certain level or lower. The overcharge detection delay time \( (t_{\text{CU}}) \) changes depending on the capacitor connected to the CCT pin.

\[
t_{\text{CU}} [s] = (6.7, 10, 13.3) \times C_{\text{CCT}} [\mu F]
\]

Similarly, the overdischarge detection delay time \( (t_{\text{DL}}) \) changes depending on the capacitor connected to the CDT pin.

\[
t_{\text{DL}} [s] = (6.7, 10, 13.3) \times C_{\text{CDT}} [\mu F]
\]

Since the S-8225A Series charges the capacitor for delay rapidly, the voltage of the CCT pin and the CDT pin becomes large if the capacitance value is small. As a result, a variation between the calculated value of the delay time and the actual delay time is generated.

If the capacitance value is so large that the rapid charging can not be finished within the internal delay time, the output pin becomes detection status simultaneously with the end of internal delay time.

In addition, the charging current to the capacitor for delay passes through the VDD pin. Therefore, a large resistor connected to the VDD pin results in a big drop of the power supply voltage at the time of rapid charging which causes malfunction.

Regarding the recommended values for external components, refer to "Table 9 Constants for External Components".

7. SEL pin

In the S-8225A Series, switchable monitoring control between 3-cell to 5-cell is possible by using the SEL1 pin and the SEL2 pin. For example, since the overdischarge detection of V4 or V5 is prohibited and the overdischarge is not detected even if V4 or V5 is shorted when the SEL1 pin is "H" and the SEL2 pin is "L", the S-8225A Series can be used for 3-cell monitoring.

Be sure to use the SEL1 pin and the SEL2 pin at "H" or "L" potential.

Caution
1. The above constants may be changed without notice.
2. The example of connection shown above and the constants do not guarantee proper operation. Perform thorough evaluation using the actual application to set the constants.
3. RVCC1 to RVCC6 and CVCC1 to CVCC6 should be the same constant, respectively.
4. Set up RVCC and CVCC as RVCC × CVCC ≥ 50 × 10^4.
5. Set up RVDD and CVDS as 5 × 10^6 ≤ RVDD × CVDS ≤ 100 × 10^6.
6. Set (RVDD × CVDS) / (RVCC × CVCC) = 0.1.

Remark  n = 1 to 6

Precautions

- The application conditions for the input voltage, output voltage, and load current should not exceed the package power dissipation.
- If both an overcharge battery and an overdischarge battery are included among the whole batteries, the condition is set in overcharge status and overdischarge status. Therefore either charging or discharging is impossible.
- Do not apply an electrostatic discharge to this IC that exceeds the performance ratings of the built-in electrostatic protection circuit.
- ABLIC Inc. claims no responsibility for any disputes arising out of or in connection with any infringement by products including this IC of patents owned by a third party.
Characteristics (Typical Data)

1. Detection voltage
   1.1 \( V_{CU} \) vs. \( T_a \)
      \[ V_{CU} = 4.225 \text{ V} \]
      \[ V_{CU} \text{ [V]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

   1.2 \( V_{CL} \) vs. \( T_a \)
      \[ V_{CL} = 4.125 \text{ V} \]
      \[ V_{CL} \text{ [V]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

   1.3 \( V_{DL} \) vs. \( T_a \)
      \[ V_{DL} = 2.30 \text{ V} \]
      \[ V_{DL} \text{ [V]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

   1.4 \( V_{DU} \) vs. \( T_a \)
      \[ V_{DU} = 2.50 \text{ V} \]
      \[ V_{DU} \text{ [V]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
         2.600 & 2.590 & 2.580 & 2.570 & 2.560 & 2.550 & & \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

2. Current consumption
   2.1 \( I_{OPE} \) vs. \( T_a \)
      \[ V_{DD} = 17.0 \text{ V} \]
      \[ I_{OPE} \text{ [μA]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
         20 & 15 & 10 & 5 & & & \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

   2.2 \( I_{PDN} \) vs. \( T_a \)
      \[ V_{DD} = 8.0 \text{ V} \]
      \[ I_{PDN} \text{ [μA]} \]
      \[ \begin{array}{cccccc}
         & -40 & -25 & 0 & 25 & 50 & 75 & 85 \\
         4.0 & 3.0 & 2.0 & 1.0 & & & \\
      \end{array} \]
      \[ T_a \text{ [°C]} \]
      \[ 0 \]

   2.3 \( I_{OPE} \) vs. \( V_{DD} \)
      \[ T_a = +25°C \]
      \[ I_{OPE} \text{ [μA]} \]
      \[ \begin{array}{cccccc}
         & 0 & 5 & 10 & 15 & 20 & 25 & 30 \\
         0 & 10 & 20 & 30 & 40 & 50 & & \\
      \end{array} \]
      \[ V_{DD} \text{ [V]} \]
3. Delay time

Disclaimers (Handling Precautions)

1. All the information described herein (product data, specifications, figures, tables, programs, algorithms and application circuit examples, etc.) is current as of publishing date of this document and is subject to change without notice.

2. The circuit examples and the usages described herein are for reference only, and do not guarantee the success of any specific mass-production design. ABLIC Inc. is not responsible for damages caused by the reasons other than the products described herein (hereinafter "the products") or infringement of third-party intellectual property right and any other right due to the use of the information described herein.

3. ABLIC Inc. is not responsible for damages caused by the incorrect information described herein.

4. Be careful to use the products within their specified ranges. Pay special attention to the absolute maximum ratings, operation voltage range and electrical characteristics, etc. ABLIC Inc. is not responsible for damages caused by failures and/or accidents, etc. that occur due to the use of the products outside their specified ranges.

5. When using the products, confirm their applications, and the laws and regulations of the region or country where they are used and verify suitability, safety and other factors for the intended use.

6. When exporting the products, comply with the Foreign Exchange and Foreign Trade Act and all other export-related laws, and follow the required procedures.

7. The products must not be used or provided (exported) for the purposes of the development of weapons of mass destruction or military use. ABLIC Inc. is not responsible for any provision (export) to those whose purpose is to develop, manufacture, use or store nuclear, biological or chemical weapons, missiles, or other military use.

8. The products are not designed to be used as part of any device or equipment that may affect the human body, human life, or assets (such as medical equipment, disaster prevention systems, security systems, combustion control systems, infrastructure control systems, vehicle equipment, traffic systems, in-vehicle equipment, aviation equipment, aerospace equipment, and nuclear-related equipment), excluding when specified for in-vehicle use or other uses. Do not apply the products to the above listed devices and equipments without prior written permission by ABLIC Inc. Especially, the products cannot be used for life support devices, devices implanted in the human body and devices that directly affect human life, etc. Prior consultation with our sales office is required when considering the above uses. ABLIC Inc. is not responsible for damages caused by unauthorized or unspecified use of our products.

9. Semiconductor products may fail or malfunction with some probability. The user of the products should therefore take responsibility to give thorough consideration to safety design including redundancy, fire spread prevention measures, and malfunction prevention to prevent accidents causing injury or death, fires and social damage, etc. that may ensue from the products' failure or malfunction. The entire system must be sufficiently evaluated and applied on customer's own responsibility.

10. The products are not designed to be radiation-proof. The necessary radiation measures should be taken in the product design by the customer depending on the intended use.

11. The products do not affect human health under normal use. However, they contain chemical substances and heavy metals and should therefore not be put in the mouth. The fracture surfaces of wafers and chips may be sharp. Be careful when handling these with the bare hands to prevent injuries, etc.

12. When disposing of the products, comply with the laws and ordinances of the country or region where they are used.
