The S-57M1 Series, developed by CMOS technology, is a high-accuracy Hall IC that operates with a high-sensitivity, a high-speed detection and low current consumption. The output voltage changes when the S-57M1 Series detects the intensity level of magnetic flux density and a polarity change. Using the S-57M1 Series with a magnet makes it possible to detect the rotation status in various devices. High-density mounting is possible by using the small SOT-23-3 package. Due to its high-accuracy magnetic characteristics, the S-57M1 Series can make operation's dispersion in the system combined with magnet smaller.

Caution This product is intended to use in general electronic devices such as consumer electronics, office equipment, and communications devices. Before using the product in medical equipment or automobile equipment including car audio, keyless entry and engine control unit, contact to ABLIC Inc. is indispensable.

Features

- Pole detection: Bipolar latch
- Detection logic for magnetism*: V_{OUT} = “L” at S pole detection
- Output form*: V_{OUT} = “H” at S pole detection
- Magnetic sensitivity:
- Operation cycle (current consumption): t_{CYCLE} = 50 \, \mu s (1400 \, \mu A) typ.
- Power supply voltage range: V_{DD} = 2.7 \, V to 5.5 \, V
- Operation temperature range: Ta = −40°C to +125°C
- Lead-free (Sn 100%), halogen-free

*1. The option can be selected.
*2. Refer to “Product Name Structure” for details.

Applications

- Motor
- Housing equipment
- Industrial equipment

Package

- SOT-23-3

# Product Name Structure

1. **Product name**

   S-57M1 x B x 1 B - M3T1 U

   - **Environmental code**
     - U: Lead-free (Sn 100%), halogen-free
   - **Package name (abbreviation) and packing specifications**
     - M3T1: SOT-23-3, Tape
   - **Operation temperature**
     - B: $T_a = -40^\circ C$ to $+125^\circ C$
   - **Magnetic sensitivity**
     - 1: $B_{OP} = 3.0$ mT typ.
   - **Detection logic for magnetism**
     - L: $V_{OUT} = "L"$ at S pole detection
     - H: $V_{OUT} = "H"$ at S pole detection
   - **Pole detection**
     - B: Bipolar latch
   - **Output form**
     - N: Nch open-drain output
     - C: CMOS output

   *1. Refer to the tape drawing.

<sup>1</sup>. B<sub>OP</sub>: Operation point  
B<sub>OP</sub> is the value of magnetic flux density when the output voltage (V<sub>OUT</sub>) changes after the magnetic flux density applied to the S-57M1 Series by the magnet (S pole) is increased (by moving the magnet closer). V<sub>OUT</sub> retains the status until a magnetic flux density of the N pole higher than B<sub>RP</sub> is applied.

<sup>2</sup>. B<sub>RP</sub>: Release point  
B<sub>RP</sub> is the value of magnetic flux density when the output voltage (V<sub>OUT</sub>) changes after the magnetic flux density applied to the S-57M1 Series by the magnet (N pole) is increased (by moving the magnet closer). V<sub>OUT</sub> retains the status until a magnetic flux density of the S pole higher than B<sub>OP</sub> is applied.

<sup>3</sup>. B<sub>HYS</sub>: Hysteresis width  
B<sub>HYS</sub> is the difference of magnetic flux density between B<sub>OP</sub> and B<sub>RP</sub>.

Remark  
The unit of magnetic density mT can be converted by using the formula 1 mT = 10 Gauss.

Figure 9

Caution The above connection diagram and constant will not guarantee successful operation. Perform thorough evaluation using the actual application to set the constant.
## Operation

1. **Direction of applied magnetic flux**

   The S-57M1 Series detects the magnetic flux density which is vertical to the marking surface. Figure 10 shows the direction in which magnetic flux is being applied.

   ![Figure 10](image)

2. **Position of Hall sensor**

   Figure 11 shows the position of Hall sensor. The center of this Hall sensor is located in the area indicated by a circle, which is in the center of a package as described below. The following also shows the distance (typ. value) between the marking surface and the chip surface of a package.

   ![Figure 11](image)
3. Basic operation
The S-57M1 Series changes the output voltage (V_{OUT}) according to the level of the magnetic flux density and a polarity change (N pole or S pole) applied by a magnet.

Definition of the magnetic field is performed every operation cycle indicated in "Electrical Characteristics".

3.1 Product with V_{OUT} = "L" at S pole detection
When the magnetic flux density of the S pole perpendicular to the marking surface exceeds the operation point (B_{OP}) after the S pole of a magnet is moved closer to the marking surface of the S-57M1 Series, V_{OUT} changes from "H" to "L". When the N pole of a magnet is moved closer to the marking surface of the S-57M1 Series and the magnetic flux density of the N pole is higher than the release point (B_{RP}), V_{OUT} changes from "L" to "H". In case of B_{RP} < B < B_{OP}, V_{OUT} retains the status.

Figure 12 shows the relationship between the magnetic flux density and V_{OUT}.

3.2 Product with V_{OUT} = "H" at S pole detection
When the magnetic flux density of the S pole perpendicular to the marking surface exceeds B_{OP} after the S pole of a magnet is moved closer to the marking surface of the S-57M1 Series, V_{OUT} changes from "L" to "H". When the N pole of a magnet is moved closer to the marking surface of the S-57M1 Series and the magnetic flux density of the N pole is higher than B_{RP}, V_{OUT} changes from "H" to "L". In case of B_{RP} < B < B_{OP}, V_{OUT} retains the status.

Figure 13 shows the relationship between the magnetic flux density and V_{OUT}.
Precautions

- If the impedance of the power supply is high, the IC may malfunction due to a supply voltage drop caused by feed-through current. Take care with the pattern wiring to ensure that the impedance of the power supply is low.

- Note that the IC may malfunction if the power supply voltage rapidly changes.

- Do not apply an electrostatic discharge to this IC that exceeds the performance ratings of the built-in electrostatic protection circuit.

- Large stress on this IC may affect on the magnetic characteristics. Avoid large stress which is caused by bend and distortion during mounting the IC on a board or handle after mounting.

- ABLIC Inc. claims no responsibility for any disputes arising out of or in connection with any infringement by products including this IC of patents owned by a third party.

ABLIC Inc.
Disclaimers (Handling Precautions)

1. All the information described herein (product data, specifications, figures, tables, programs, algorithms and application circuit examples, etc.) is current as of publishing date of this document and is subject to change without notice.

2. The circuit examples and the usages described herein are for reference only, and do not guarantee the success of any specific mass-production design.
   ABLIC Inc. is not responsible for damages caused by the reasons other than the products described herein (hereinafter "the products") or infringement of third-party intellectual property right and any other right due to the use of the information described herein.

3. ABLIC Inc. is not responsible for damages caused by the incorrect information described herein.

4. Be careful to use the products within their specified ranges. Pay special attention to the absolute maximum ratings, operation voltage range and electrical characteristics, etc.
   ABLIC Inc. is not responsible for damages caused by failures and/or accidents, etc. that occur due to the use of the products outside their specified ranges.

5. When using the products, confirm their applications, and the laws and regulations of the region or country where they are used and verify suitability, safety and other factors for the intended use.

6. When exporting the products, comply with the Foreign Exchange and Foreign Trade Act and all other export-related laws, and follow the required procedures.

7. The products must not be used or provided (exported) for the purposes of the development of weapons of mass destruction or military use. ABLIC Inc. is not responsible for any provision (export) to those whose purpose is to develop, manufacture, use or store nuclear, biological or chemical weapons, missiles, or other military use.

8. The products are not designed to be used as part of any device or equipment that may affect the human body, human life, or assets (such as medical equipment, disaster prevention systems, security systems, combustion control systems, infrastructure control systems, vehicle equipment, traffic systems, in-vehicle equipment, aviation equipment, aerospace equipment, and nuclear-related equipment), excluding when specified for in-vehicle use or other uses. Do not apply the products to the above listed devices and equipments without prior written permission by ABLIC Inc.
   Especially, the products cannot be used for life support devices, devices implanted in the human body and devices that directly affect human life, etc.
   Prior consultation with our sales office is required when considering the above uses.
   ABLIC Inc. is not responsible for damages caused by unauthorized or unspecified use of our products.

9. Semiconductor products may fail or malfunction with some probability.
   The user of the products should therefore take responsibility to give thorough consideration to safety design including redundancy, fire spread prevention measures, and malfunction prevention to prevent accidents causing injury or death, fires and social damage, etc. that may ensue from the products’ failure or malfunction.
   The entire system must be sufficiently evaluated and applied on customer’s own responsibility.

10. The products are not designed to be radiation-proof. The necessary radiation measures should be taken in the product design by the customer depending on the intended use.

11. The products do not affect human health under normal use. However, they contain chemical substances and heavy metals and should therefore not be put in the mouth. The fracture surfaces of wafers and chips may be sharp. Be careful when handling these with the bare hands to prevent injuries, etc.

12. When disposing of the products, comply with the laws and ordinances of the country or region where they are used.

13. The information described herein contains copyright information and know-how of ABLIC Inc.
   The information described herein does not convey any license under any intellectual property rights or any other rights belonging to ABLIC Inc. or a third party. Reproduction or copying of the information from this document or any part of this document described herein for the purpose of disclosing it to a third-party without the express permission of ABLIC Inc. is strictly prohibited.

14. For more details on the information described herein, contact our sales office.
